

ROLA RENOWN LOCKING BOLTS

Description

- Rola Renown locking bolts are used to secure wooden and metal French doors, hinged back doors and back gates.
- They are also used as temporary locks, on doors previously attacked, whilst a new door is being prepared.
- Most Rola Renown bolts are supplied with a knob end to allow a simple push and pull action especially necessary for users with impaired dexterity, and because the bolts do not lock automatically, they are more suited for the disabled.
- Rola Renown bolts come in four sizes:
 - 800mm.** The Rola Renown 800 has a **25mm throw** and is suitable for the top bolt on tall doors or operation by users confined to wheel-chairs.
 - 550mm.** The Rola Renown 550 has a **25mm throw**. It is useful where extra length is required or as a bottom bolt for those confined to wheel-chairs.
 - 190mm.** The 190 model has the added advantage of a longer **75mm throw**.
 - 130mm.** The standard Rola Renown comes in two body shapes the knob end and a streamlined version, both have a **25mm throw**.

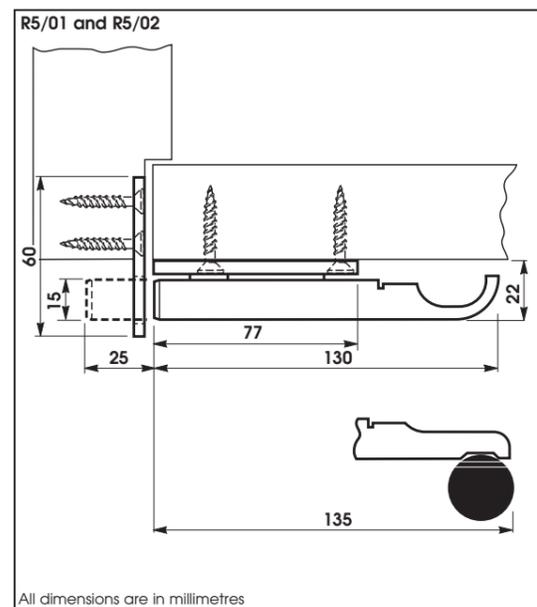

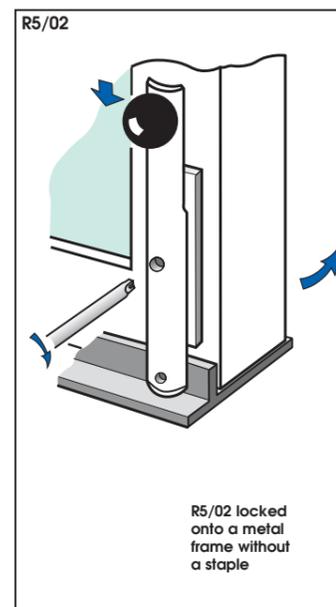

- Packing pieces are available 3mm thick to pack under bolts. The 2mm for Crittall frames.
- All Rola Renown products are supplied with their own fixings.

Installation

- Rola Renown locking bolts are simple to fit being surface mounted onto the door. If necessary use the correct packing pieces.
- When the the bolt is secured into a wooden frame a staple must be used to maintain maximum security.

Operation

- All products in the Rola range are operated by the uniquely designed Rola Key.

Product Code	Description	Finish	Number per pack

ROLA RENOWN STAPLES

Description

- Rola Renown staples are used to secure or provide bolt holes in wooden frames.
- Rola Renown bolts come in four sizes and three designs, **A**, **H** and **L**:

Design **A** is for inwardly opening doors such as back gates, front doors and as a temporary lock after normal locks fail.

Design **H** is for outwardly opening doors such as French doors.

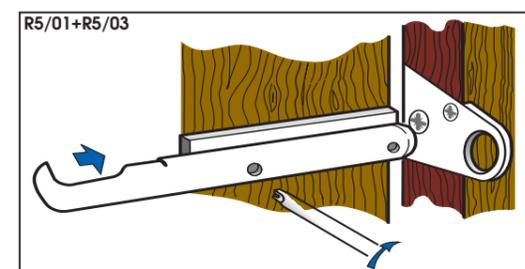

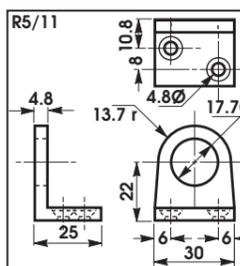

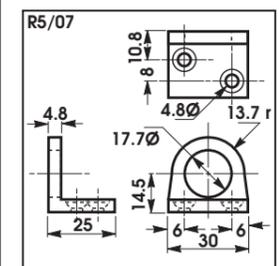

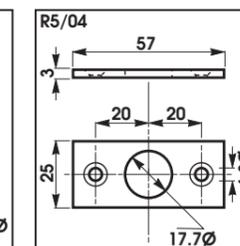

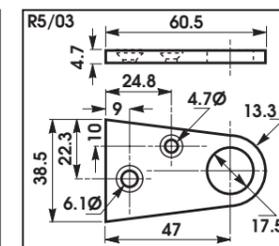

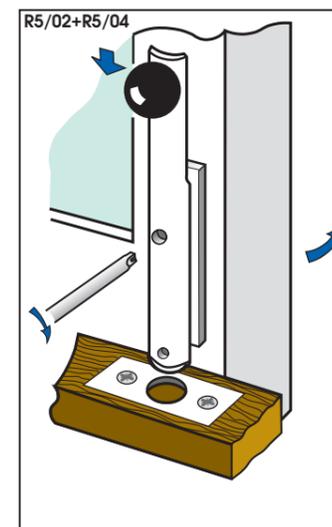

Design **L** is for use as an alternative when frame construction does not allow design **A** or **H** top be used. Hole centres approximately 14.5mm and 22mm from the base of the **L**.

Installation

- Where possible Rola Renown staples should be recessed into the wooden frame for maximum strength.

Product Code

- Product codes relate to each product and also to how they are supplied; packed singly, packed in multiples or loose. See list of options. Where Rola Products are packed, this includes a display header card and if applicable, fixing instructions.
